

## CHASE SMALL CRAFT

# New Points East Pram is Ideal For Rowing, Motoring, and Sailing

**L**AST YEAR, Chase Small Craft collaborated with *Points East Magazine* to create the Points East Pram.

The design, in 8' and 10' versions, is a perfect first-time boatbuilding project. Stable and ultralight, it's a superb tender and dinghy for rowing, motoring, and sailing.

"It's about time a new pram design came along that was as easy to build as a stitch-and-glue kit, but with the means to teach real boatbuilding skills to my students in just a few days," said one Maryland teacher and boater.

Chase Small Craft owner Clint Chase said he envisioned a design that would stand out aesthetically and functionally.

The new pram is not just another "stitch-and-glue" kit; instead it uses a mix of construction systems—stitch-and-tape, screw-and-glue, and glued-lapstrake—that uniquely teaches traditional boatbuilding skills in an accessible package.

Hull construction utilizes Chase Small Craft's novel "Tab-'n-Lock" construction method, making the boat a snap to build. A

small electric motor can be mounted on the transom.

Customers can choose from a plywood or timber kit, with optional hardware and epoxy kits.

"She is a sweet rowing dinghy—zero wake and effortless glide," said Chase. "We think people will enjoy her very much."

The boat makes a great tender and a super first boatbuilding experience for kids and adults. This summer, Chase is offering three-day and week-long courses, for individuals and families,

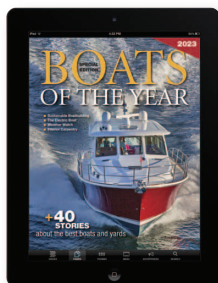

focused on building the pram at a variety of Maine locations. Check out [chase-small-craft.com/boatbuilding-101](http://chase-small-craft.com/boatbuilding-101).
